Please cancel Claims 1-16 and add Claims 17-23 as follows:

Claim 1 – 16 (Cancelled)

- 17. (New) A liquid crystal display device comprising a reflector having a plurality of light reflective concave portions on a surface of a base material, each said concave portion having a curved surface with a maximum inclination angle at one side portion thereof so that the one side portion has a larger reflectance magnitude than an opposing side portion, and a light reflectance peak at a predetermined angle in accordance with a location of the maximum inclination angle, and that opposes a viewpoint of an observer.
- 18. (New) The liquid crystal display device of claim 17, wherein the base material is reflective, thereby forming a reflective liquid crystal display device.
- 19. (New) The liquid crystal display device of claim 17, wherein the base material is semitransparent and semi-reflective, thereby forming a semitransparent and semi-reflective liquid crystal display device.
- 20. (New) The liquid crystal display device of claim 19, wherein the base material comprises a half mirror.
- 21. (New) The liquid crystal display device of claim 17, further comprising a pair of substrates, a liquid crystal layer disposed between the substrates, the reflector disposed on one of the substrates, a transparent intervening layer disposed on the reflector, a color filter layer disposed on the transparent intervening layer, a transparent planarization layer disposed on the color filter layer, a transparent electrode disposed on the transparent planarization layer, and an alignment layer disposed between the transparent electrode and the liquid crystal layer.
- 22. (New) The liquid crystal display device of claim 17, further comprising a pair of substrates, a liquid crystal layer disposed between the substrates, the reflector disposed on one of the substrates, a transparent intervening layer disposed on the reflector, a color filter layer disposed on the transparent intervening layer, a transparent planarization layer disposed on the color filter layer, and an alignment

layer disposed between the transparent planarization layer and the liquid crystal layer, the reflector serving as a transparent electrode.

23. (New) The liquid crystal display device of claim 17, wherein the reflector serves as a transparent electrode.
